

RM-10352 will benefit all radio amateurs who frequent the 160 meter band. Having operated on 160 meters for 15 years I am acutely aware to interference caused to CW operators because of the lack of a legal band plan. The idea of 160 meters being the gentlemens band was conceived when only a few operators were actively operating there. As the ranks of radio amateurs has grown 160 meters has seen a commensurate increase in activity. This increase has led to confusion and for the most part unintentional interference to CW operators. I fully support the purpose behind RM-10352

Thank you,
Ralph McClintock W1ZK
